

# BITCOIN EXPLOSION

Thank you for purchasing a copy of Bitcoin Explosion! I after you have gained all of the knowledge listed in this book, that you are able to make as much money as I have.

This e-Book includes of (X) amount of methods that is sure to have you earn profits!

**Method #1:** <http://DiceCoin.io>

This is a website that I use very often, and can easily be mistaken for an ATM because of how easy it is to win. I have used this site a countless amount of times, and MOST of the time, it does not let me down. Essentially, the site is similar to websites like <http://primedice.com> although VPN's are not needed, and I have made more profits on this specific site than on any other similar dice site.

Essentially this site is similar to rolling a dice, thus the name. You roll the dice, and depending on which percentage you choose, it can vary your winnings. The default percentage is fifty percent, which essentially means, each time you roll on a dice, you have a fifty percent chance of winning. If you roll on any odd numbers, you could win, which would later conclude that if you roll on any even numbers, you would lose. My terms are a bit more complicated, however hopefully you understand what I mean.

Please look at the recent bets before you test any of these methods! If many people are winning, it is proven that you will most likely as well. (Trust me, I've been betting on this site for a while.)

**Method #1.1:** Manually Betting

One of the best ways to gamble on this site is manually, due to the fact that you can watch your earnings, and stop whenever you believe it is needed, thus having you not lose all your winnings all at once. Although this method can be very time consuming, most of my earnings were made solely on this method.

Although you can change around all of the percentages on this website, for manually betting, it has been shown from my bets, that it is best to keep the percentage at fifty.

Game	Chance	Payout	Max bet	
<5,000	50%	1.98x	5.22	✓

This is a very basic method, however if used efficiently, it will be one of the best you have seen. Essentially, for this method, you start betting from the minimum bet. Which is **0.000001 BTC**

0.0000001

2x

Bet Min

Bet Max

Place this as your start bet, and click on roll dice.

Keep on clicking the “Roll Dice” button until you lose twice in a roll. From there, click on the “2x” button located directly next to the initial bet box. If you lose three times in a row, double again, and so on and so forth.

If you have lost more than 8 times in a row, and your balance is almost done, **DO NOT CONTINUE** to do this.

If you feel that this is taking too long, you can click on the “Bet Min” button, until you reach the 100’s. From there, you can bet, and use this specific method. Obviously this is a riskier bet, however this is what makes profit in a faster amount of time.

### **Method 1.2:** Automatic Betting

This method has been profited a lot, however in much smaller amounts. The profit is somewhat small, unless you lose multiple times in a row, however this specific bet is riskier as well. Essentially, you change the percentage to 25% which would lead to a 3.96 payout, instead of 1.98. Almost doubled, for a 25% chance of winning. From here, you click on the “Automatic Bet” tab, and input “0.00001” as the “Start Bet,” “1.5x” as the “Multiplier,” and “50” as the “Number of Bets.”

Doing this for long periods of time is not recommended. From experience of using this site, I believe after a certain amount of winnings are achieved, the success rates start to move down. This is why it is best to look at the recent bets in your specific percentage before betting!

Your screen should look like this if you inputted everything correctly.

Manual bet
Automatic bet

Game	Chance	Payout	Max bet	
<5,000	50%	1.98x	5.22	✓

START

### Method #2: <http://BustaBit.com>

Here is a website, that I don't use as often, however profits are most definitely made when they are needed. If you have ever seen the stock market, Bustabit is somewhat similar, although if there is a "bust" then you lose everything that you have bet. Essentially, as the chart goes up, your initial bet is multiplied by whatever times the chart is on. BustaBit bets in my opinion are a bit riskier, so if you are not looking for very risky bets, this most likely will not be the method for you.

This is the bet multiplier / chart that I was speaking of previously.

### **Method #2.1:** Manually Betting

Before you bet, it is always best to find or try to find a pattern. Watch at least 20 rounds and record this data yourself to try and have some thought of the current algorithm. After you do this, you are ready to go. Basically, from what I have learned from using BustaBit is if the last couple of rounds that were played was a high multiplier, then the next couple would result in a low multiplier. If the last couple of rounds that were played was a low multiplier, then the next couple of rounds would result in a high multiplier.

Essentially, you input a bet and take the risk. This is one of the riskier methods I have, however if you are willing to take the risk, the profits will be tremendous. To make the quickest amounts of money in the shortest amount of time, it is always best to bet all in. However, if you aren't looking to do that, I would recommend splitting your bets in quarters of your balance, or less.

When entering your bets, just note that this is a very risky type of bet. If you aren't very good at looking through data, or having a good gut feeling, then this really isn't recommended.

A good tip is to watch other users bet. If most people are cashing out at this specific amount of time, you should be ready to as well.

### **Method #2.2:** Automatic Betting

Automatic betting with BustaBit is much more preferred by me. I would recommend this over manually betting by far, due to not so great past experiences. Although betting automatically is just as risky, it is much less risky, and if you have the balance, making profits shouldn't be much of an issue. Click on the "Auto" tab and input "x" (The number of bits you'd like to bet, most of the time I'd choose the max about I have.) and "1.10" as the "Auto Cashout." This would result into every time you having a 1.10x multiplier on your initial bet, and within 10 bets, you should have easily been able to double your profits.

The image shows a dark-themed user interface for a betting application. At the top, there are two tabs: 'MANUAL' and 'AUTO'. The 'AUTO' tab is selected and highlighted in orange. Below the tabs, there are three input fields with labels and values:

- Base Bet:** The input field contains 'x' followed by 'Bits'.
- Auto Cashout at:** The input field contains '1.10' followed by 'x'.
- Stop if bet is >:** The input field contains '1000000' followed by 'Bits'.

Due note that at any point in time, there can be a bust at 0.00x. It has happened to me multiple times, and this would result in a loss of you initial bet. It's a very sad thing to happen, however as long as you don't get too greedy and leave the Auto bet on too long, then you should be fine.

### **Special Method:** How to get free BitCoins

There are various amounts of websites to get free BitCoins as long as you have the patience, as well as a computer and a brain the size of an eraser (or larger.) I will not be going in-depth with these websites because for the most part, they are relatively self-explanatory. Every hour, minute, second, etc. You complete a verification proving you are alive, and from there you are able to withdraw a certain amount of bitcoins. Not necessarily \$1.00's worth or anything like that, but everything adds up.

Lists of Sites:

<http://bitcurl.me>

<http://raincoins.net>

<http://smurfcoin.com>

<http://bitcoinfaucet.me>

<http://free-bitcoins.co>

You are able to receive faucets from many of the gambling sites that were mentioned previously. For example, in BustaBit you are able to obtain 2 bits every hour, and in DiceCoin you are able to obtain 0.00001 BTC every 5 minutes. Personally, using the strategies above, I have made around 0.14 BTC which is converted into around \$60.00 USD from the DiceCoin faucet in less than 2 hours. That's less than a cent to \$60.00!

### **To Conclude:**

Overall, methods to make money such these will indeed make you money, but gambling is gambling, and there is no way to stop that there is most definitely luck involved. Although at times, you are able to beat the system, going all in bets like a madman will not get you anywhere.

I have had times when betting where I have lost nearly everything. It's a sad thing, but if you kept on winning, then the websites themselves would be losing profit, and they can't do that.

I dearly hope this eBook helped you understand some methods, and interpret how to make yourself a richer, yet more intelligent gambler. If these methods helped, please be sure to send me a skype message or PM stating a simple "Thank you!" This eBook took me a while to write and complete, so anything is appreciated.
