CORE SPREADING **GUIDE**

T.O.S

By reading this guide you agree not to resell, leech or share this guide with anyone. I am not responsible for your actions or what you use this guide for, this is strictly for educational purposes.

Introduction

In this guide you will find ways in which you will get many executions, ways which aren't used by others, ways that are. All in all, this guide shall grant you a very large amount of executions daily.

Content Mentioned

All content or links mentioned in this guide

can be found at the very bottom of this ebook. If there is something missing, please report it to 'zCore™' on Hack Forums. If you do not have a java driveby generator, the best one to use (my opinion) is Epic Java as it has templates and domains for you to use. You can find a link to that below. If you do not want to buy a JDB generator and want just a single one, Epic Software does a service for that too, you can find the link below.

OMEGLE METHOD

This is the best method in my opinion and will get you the highest amount of executions. For this you will need a crypter, a JDB and an Omegle spammer (all found below). To start off you want to write a script, the script should go like this:

(3 Seconds) : Heyyy

(1 Second) : Female, 19, US, looking for fun;)

(2 Seconds) : You up for any fun? ;)

*(2 Seconds) : Came on here cause I am horny
btw;)*

*(4 Seconds) Okay, we can have fun in like an
hour or something, talk to me on my live cam
show at: [JDB LINK HERE]*

(3 Seconds) Okay bye:)

(Wait 6 seconds before skipping then repeat)

**7/10 Male Omegle partners will run java so
this method works great!**

YOUTUBE METHOD

**For YouTube, you can do anything you like
but I'm about to explain a few which stand
out from the rest and will get you the most
executions. Method number one is a video
about a free facebook like bot and a follower
bot, this will get many executions if you
make the video look professional and**

commentate over it with a clear voice and use a HD screen recorder. Also, post proof of the bot working (use AddMeFast or any other pay per click site such as EnhanceViews to gain the likes/followers - link below). Use my application made in VB to show on the video if you are unable to provide your own.

Method number two is the exact same but with YouTube. Use my application made in VB to show on the video if you are unable to provide your own.

Method number three is a paypal money spoofer/generator. Make a video showing a supposed paypal money generator and to show proof, simply edit your balance by going to paypal, highlighting your balance, selecting 'Inspect element' and then click the drop down arrow to the left of '<spam class="balance">' and it should say your balance three lines below, double click it and you can then edit it to say whatever you like. Again, be sure to have a crystal clear voice and a HD recording. Use my application

made in VB if you are unable to provide your own.

FORUMS

Forums are a great way of spreading viruses if you know what the people registered to the forums are into and the level of knowledge that they have. An example of a forum not to do it to is HackForums as the users there know about the world of hacking and how it can be done and will often backtrace it and make you regret it. A good example if you want many slaves is a childrens forums. I know that this might sound 'stingy' or nasty but it has to be done if you want many slaves. First of all, if the forums is a game such as club penguin, say that there is a money hack or a membership hack and the children will be swarming all over it. If the forums is a childrens TV show, make a java driveby and use the 'videoreaper' template

from EpicJava and tell them it is a 'secret' or unseen episode of their favourite TV show. This method works like a charm and you are guaranteed slaves. If you do not have Epic Java and want to buy it, the link can be found below. If you don't want to buy Epic Java and just want one JDB link then you can generate just one for a small price, the link is below. Another good forum to take advantage of is TTG (TheTechGame) and its users are usually kids who can't play games for themselves and are looking for people to hack for them, so you give them what you want and write a nice little tutorial out, here is a tutorial you can copy and paste:

*Hey guys, ***username here*** and today I am bringing you a work of art in which I have been working on for the past couple of weeks. I have made a multi-platform console editor in which you can mod any game if you have patches. To start off, you want to get my console editor, link here: ***infected file link***. Once you have downloaded that, connect your console be it PS3/PS4 or Xbox 360/Xbox One to your laptop*

*using a USB. Make sure your console is on the startup screen when you press the 'on' button and do not press anything else. Open up ***infected file*** and tick your console and hit 'edit'. Once you pressed edit, your console should turn off and once turned back on, open up 'FTP Giant' on your console (PS3 it is under 'GAME' and Xbox 360 it is on the dashboard) and connect to your console using the details on your TV, a nice program you can use to connect to your console is FileZilla. You can now edit anything on your console without any restrictions, have fun!:D If you are having any trouble, watch my YouTube video: **(video link found below)**.*

This method works great and you can guarantee many slaves! To make it even easier, use enhanceviews on your video and enhancelikes and write many comments saying thanks etc. Also, to make it the extra bit easier, target a high repped or well-known and trusted member on the forums and comment on it with their account and then use the accounts you hack to say thanks on

the thread and edit the post which may say 'doesn't work' to say "thanks, worked like a charm!:D" and your slaves will be pouring in! If you cannot provide your own legit looking application to show in the video, you can use mine made in VB, it is linked below.

PAY PER CLICK SITES

This method takes a second advantage over sites such as AddMeFast or EnhanceViews or any other pay per click site. To get started, I will explain what a pay per click site is and how they work. First of all, when a user signs up, they will usually have enough points to post one link, a link in which they wish to promote. Other users may of already posted a site and ran out of points and in order to attain more points, they must view other peoples links which they posted. This is a great way for your JDB to get views and a lot of executions as most users on there will be

what's known as 'wannabe-hipsters' or 'sw@ggots' trying to get likes on their facebook pictures and will have no knowledge of the computer and hacking world. To take advantage of this, you just want to simply post your link on there and in your link should be a site which claims to bot youtube views, twitter followers and facebook likes and followers (template link below). The url should not matter as the user of the site does not see the url. Now just sit back and wait for slaves.

MASS EMAIL

For this method, you are going to need an email list, a relatively large one. I have a list with 16 million emails of facebook users and this is great as I know what they use and facebook can be used as a main attraction for this specific audience. Now you can have an email list for anything and even a whole mix and it will still work if you have the right

idea. For now, I will talk about a facebook spread. Think about what the users of facebook will be willing to download or a site they will be willing to visit. Using a JDB is a lot easier in this because most people aren't stupid enough to go and download any random file from the web but you will still get a nice amount of slaves. In my example I will be sending an email about turning your facebook profile any color (colour) you would like with no liking or sharing the page. Here is an example for an email:

Dear Facebook user, my name is John and today I am emailing you to tell you about a project I have been working on recently. As I am not the richest person you would come across, I can not pay for advertising but I feel the time I spent on my project deserves some recognition. My company is a non-profit organization and we rely on website ads for income. Enough about me and my company though and onto my project. My project is about being happier when you come onto facebook and come off it. Recent studies have shown that the blue color on the

*facebook homepage is a dull colour and after viewing it for too long can change the mood of one and make them feel down or low. To prevent this, with facebook's new patch, color changing of one's profile is now possible! We are taking advantage of this and we would like you to check out our site to change your profile online! Come try it now @ ***JDB Link****

Now I'm sure you can come up with something better than that as that is just the beginning of what you can do with a mass email. If you can come up with a unique idea that will catch the eye of your audience, you are all set to go!

MINECRAFT SPAM

Now this method works REALLY well, all you need is a good enough RAM to run at least 3 windows of Minecraft all running autotypers. To start off, you want to get a Minecraft autotyper client (link below) and you want to make a JDB or an application related to a

free booter. You now want to hop on three popular MC servers (150+ players) and you want to spam "Core Booter FREE @ ***JDB** **Link*** hitting at 8GBPS for unlimited boot time! No downloads! NEW! Get it now!" and slaves will be falling onto your RAT. You can find a free booter template linked below.
