Table of Contents

Introduction

If you're reading this, it means you've purchased this eBook from Kouichi on HF (UID = 2300529, PM me with any questions or problems) so I thank you for spending your money on this eBook, much love to you. :) Now, in this eBook, I will cover a bunch of doxing methods and ways to gain information on a target. This eBook was only $5, if you have payed more for it anywhere, I suggest you try and get a refund because I, Kouichi, am the only one allowed to sell this unless I give someone permission to sell it for resell rights. Anyways, some of these methods are pretty known while some are not, thanks for reading and I hope you enjoy! If you have any questions, problems, or

concerns, then PM me on HF and try to be descriptive with your problem. Remember, this eBook belongs to Kouichi from HF, please, please warn me if someone has sold/gave this to you besides me, I'll handle it myself. I've worked really hard on this eBook and I don't want someone giving it away for free, so please respect that and do not give this away, thanks for understanding, now get out there and dox some skids!

What Is Doxing?

So you'd like to know what doxing is, eh? Dox is short for docs which is short for documents. When you dox someone, you gain lots of their personal information, whether it be for revenge, payback, money, or just for fun. Most of the time, doxing is legal unless you're going really in-depth with it like gaining Credit Card information or SSNs, that makes it illegal and you could get in a shit ton of trouble with the law. Anyways, this guide will go over various methods on gaining information on your target so they'll know not to mess with you again as you have their personal information and you'll release it to the public if they don't fuck off.

Doxing Template

You want to look like a professional while doxing, right? Then you'll need a professional look, and that includes a nice template, so stop looking on Pastebin for "hacker dox template" and use the one I provide you. It isn't really in-depth but you can still use it and modify it to look sexy by including some ASCII art, providing a table of contents, etc. This'll only be a short part, I just wanted to give you guys a template.

```
--------------------------------------------------
*Personal Information:
Full Name:
Phone Number:
DOB:
Email:
Picture:
Alias:
--------------------------------------------------
*Location Information:
Address:
Area Code:
Zip:

Country:
```

Continent:
----
*IP Information:
IP Address:
ISP:
Hostname:
----
*Social Media Accounts:

Reason For Dox:
Dropped By: @(twitter handle here)
You've fucked with the wrong people, cya.

Anonymous Doxing

 Okay, so we all want to dox, but we don't want to get caught while we're doxing someone, right? If you get caught doxing, there is a chance you'll get caught if you're not using the right tools like a VPN, TOR, and proxies. We need to get our information silently - in and out - without being noticed. To start, we'll need a browser that will cover up our IP address and prevent someone from DDoSing us if they catch us doxing them. This browser is known as TOR, a lot of people use this that care about their anonymity. To get TOR, simple go their website - https://torproject.org - and download it. I will not explain how to go over it as it's pretty simple to set up. Now that we have TOR, we don't want to get into it yet, we need to get a VPN so we can cover up our IP address even more. A free VPN could work if you're not intending on doing illegal things like grabbing SSNs and such. A paid VPN that doesn't keep logs could work if you're doing things like grabbing SSNs. I don't recommend any free VPN since they'll give your IP up quicker than you can read this sentence, but if you're not doing illegal things, you don't have anything to worry about when using a free VPN.

List of free VPNs -

http://hotspotshield.com/ - Hotspot Shield
http://www.cyberghostvpn.com/en_us - CyberGhost VPN
http://www.hackforums.net/showthread.php?tid=4416091 - Offshore Box

List of paid VPNs -

http://www.hackforums.net/showthread.php?tid=4314950 - KnightVPN
http://www.hackforums.net/showthread.php?tid=3288623 - Cryptic's VPN
http://www.hackforums.net/showthread.php?tid=4445017 - Callam's VPN
http://www.hackforums.net/showthread.php?tid=4033391 - EZ VPN

Now that we're behind TOR and a VPN, we're ready to get to silent doxing. You can get more in-depth with your anonymity with things like TrueCrypt, proxies, etc. but I will not be going in-depth on them, I'm sure you can find some decent threads on HF about them though.

Getting Your Target's IP Address

There are a lot of ways to get your target's IP address. One of them includes using Skype resolvers, I'll list a few that you can use to complete this task. Please remember that blocking Skype resolvers is possible so you'll need to use an IP logger, I'll tell you how to do that in a bit.

List of Skype resolvers -

http://resolver.in/resolve/
http://www.skyperesolver.com
http://anonware.net/resolver/skype.php
http://dailygrab.info/login.php
http://exclusivestresser-v3.biz/register
http://powerstress.hj.cx/skype/
http://mostwantedhf.info/
http://iskyperesolve.com/
http://resistantresolver.net/
http://resolveme.org/
http://sassystresser.com/
http://skype-resolve.com/
http://www.speedresolve.com/resolve.php
http://ge.tt/1nqQHh51/v/0
http://www.vbooter.com/
http://tsukra-api.net/
http://www.celerystresser.com/skype
http://skypegrab.com/skype
http://thginkkcalb.com/sk.php
https://www.cloudsresolver.com/skype
http://www.hfziux.tk/skype.php
http://www.skype2ip.se/
http://smsfuzz.com/skype.php
http://iresolved.net/

I'll be using the site "mostwantedhf.info" for my explanation of using Skype resolvers since it's my favorite. Once you got to the website, you should appear on a page that says something like "Skype Resolver - Enter a username" or "Enter Skype name to

resolve here", find a box where you can input a Skype username, this is where you'll input your target's Skype to get their IP. You must put their Skype name, not their display name. If you're unsure about what I mean, it is the name that you cannot change after registration, you're allowed to change your display name but not your profile name. If you still don't get it, right click their Skype profile and copy the text that says "Skype Name (skype.name.that.cannot.be.spaced.out.here)", you should be copying his name. Once you copy his name, paste it into the box that says "Skype Username" and press "Grab IP", and once you do that, the page should give you his IP in the box that says "Result" and you'll have their IP address! Sometimes, you'll get an error trying to resolve their name so you'll need to retry 3-5 more times but if you keep getting the same error constantly, try switching to another Skype resolver. If you cannot get their IP on those sites, then that means they probably have blocked Skype IPs so we need to get their IP using an IP logger.

Using IP loggers is simple, most sites are self-explanatory but I'll still explain how to use them for anyone who needs it. I'll be using the site "whatstheirip.com" in my explanation of using IP loggers. When you visit the site, you'll see a box that says "Your Email Address" with a text box next to it, input your email into that box and press "Get Link" - note that "whatstheirip.com" doesn't work for Yahoo so I suggest getting a Gmail account if you don't already have one. Once you press the "Get Link" button, it'll give you a link to send to your target. Make sure you don't click this link yourself unless you know what your IP address is, you don't want to go and dox/ddos/etc. yourself, now do you? Anyways, send them the link and when they click it, you should be notified with an email that contains your targets email! Congratulations, you have their IP address, now let's see what we can do with it.

What's that you say? Your target won't click your IP logger? That's probably because the link might look a bit weird to them. There are many ways to change up the link and still get their IP address in the email, just shorten the link and send the shortened link to them, they'll most likely click it if they're not skeptical as fuck. My favorite site to use to shorten links is bitly but I'll give you a few more to use. In my explanation of shortening links, I'll use bitly.

List of link shortening sites -
bitly.com
goo.gl
ad.fly
bit.do
t.co (cannot be used outside of Twitter though)
tinyurl.com
ow.ly
db.tt

lnkd.in
qr.ae
adcrun.ch

You can make some money off those sites while shortening links as well but I recommend just sticking to bitly, it's simple and you don't need an account last time I checked. Anyways, let's talk about how to shorten your link. Once you get your link from your IP logger, then copy the link and go over to bitly.com and you should see a box that says "paste a link to shorten" at the top-right of the page. What you need to do is paste your link into that box. Bitly should shorten the link automatically once you paste it in but if not, just press the "Shorten" yourself to get your link. Once you shorten your link, bitly should give you a link that looks something like this - http://bit.ly/1sYIFH3 - They is a shortened link to my profile on HF, thanks to bitly, it looks more legit without the word "hack" in the name. Once you have your shortened link, send it to your target, bitly will send them straight to your IP logger and you should get the email with your target's IP address. It shouldn't mess up as bitly just redirects them to your site.

Using Their IP Address

Now that we have our target's IP address, we can do a few things to get their dox. There are a list of "IP to location" tools so I'll list them all after I finish explaining this. There is NOT ONE of these that gives you their exact address, only things like their city, state, area code, etc. but not their address, I'll explain how to get this later with their IP.

List of IP to location tools -

http://infosniper.net (My favorite)
http://whois.domaintools.com
http://www.ip-address.org/tracer/ip-whois.php
http://www.ip-adress.com/ipaddresstolocation/
http://www.iplocationtools.com/

I'll be using "Infosniper.net" in my explanation of using IP to location tools. Once you go on the site, you can see that you already your IP details displayed so you know the site works. You'll copy their IP address and paste it into the box to the right of "Check", make sure you replace your IP address with your target's IP or you might mess up the search. If you're not sure what an IP looks like (highly doubt you don't), it'll look something like "50.193.83.19" so that's what you'll put into the box. Once you put their IP in the box, press the "Check" button and it'll display all kinds of info on your target like their Provider (also known as their ISP, I'll explain how to use this to get their address and other things later), city, state, country, continent, hostname, dma

code, area code, postal code, but do not pay attention to the latitude/longitude coordinates, these will NOT get you their address, pay no attention to them as they're very inaccurate and will only make you look like an idiot if you include them in a dox. I suppose you're filling out your template for your dox so be sure to add these things (except the latitude/longitude) to it. Now that we have their IP and ISP, we can do something to gain other information such as their name, phone number, emails, etc. but keep in mind, this method will be blackhat, meaning illegal, so skip over it if you'd like but for those risk-takers, I'll include it.

IP2Skype tools

There is another thing you can do with their IP address. Say you didn't send them an IP logger on Skype, and you've sent it to them on another site. Don't you want to find their Skype? You can easily trace their IP address back to their Skype account with IP2Skype tools online. It's pretty simple - I'll be using ResolveThem's IP2Skype tool in my demonstration but you can use whatever floats your boat.

List of IP2Skype tools -
http://resolvethem.com/ip2skype.php
http://lunix.biz/ip2skype.php
https://www.hanzresolver.com/ip2skype
http://www.abrasivecraft.com/ip2skype.html
http://www.hfresolver.com/ip2skyped.php

Now that we're on ResolveThem, we'll need to copy their IP address. Once you copy their IP address, paste it into the box that says "127.0.0.1" under "Username" and press the "Submit" button. Once you press the submit button, it should give your the Skype name of that IP address. Chances are that the IP2Skype tool you're using won't have their IP in the database so you'll need to use another one. Once you get their Skype from one of the IP2Skype tools, you can gain more information on them like their alias(s), emails, etc. so this could be very helpful if you don't have their Skype yet.

ISP Doxing

I'll remind you again, this method is blackhat, meaning it's illegal and can get you in trouble if you're caught but I wouldn't worry too much, just don't be an idiot and call with your regular phone. Try finding a free calling service online and connect to the site using a VPN + TOR + Proxy combination and you should be safe, but you can add more to be extra safe while doing this like VPN + Virtual Machine + VPN + TOR + Proxy

+ Caller, it's up to you on what you use for calling, you can even use Skype to call their ISP, most ISP numbers don't need Skype credit in order to be called so you know what that means, right? FREE ISP DOXING, NO NEED FOR THAT FUCKING SHIT SKYPE CREDIT! :D Anyways, let's call up their ISP and get some information. If you don't know their ISP number, check baack on the Infosniper.net site and look for their "Provider" and search for their website on Google, then find their contact page or whatever for their number, then put this number in Skype and call it. Pretend you're working for the company and your computer is messing up so you cannot use the ISP tool to look up information on the customer, they'll most likely give you their information. An example of a conversation is below -

You: Hello, is this (target's ISP)?

ISP: Yes, how may we help you, sir?

You: Hey, this is Tom, I'm trying to look up a customer using our ISP tool (make sure you know what tool they use, this is in case they ask you what tool you're using, you don't want to end up looking retarded, do you? I'll tell you which ones they use below) but my computer is acting up really bad and this customer is getting impatient.

ISP: Okay, may we have their phone number and name, please Tom?

You: The thing is, all I have is their IP address since I'm in a chat with them right now, could you please look it up in one of our tools?

ISP: Sure thing, give me a second, Tom.

You: Alright, thanks.

ISP: Here we go, what would you like to know? I've pulled the customer up and I have their information here.

You: Could I get their full name, address, and phone number, please?

ISP: Sure, their name is (full name here), their address is (address here), and their number is (phone number here), is that all, Tom?

You have two choices here, say "No thanks, thank you for the help!" or try to milk out more information on the target. Remember, you're doing something illegal so you can stop while you're ahead and not detected or keep going for things like their SSN or emails. If you want to continue, here is an example of the conversation

You: Ah, no, I would like to verify that this guy isn't messing with me, could I please get their email to confirm that these two have the same emails?

ISP: Yessir, their email is (email here), is that all?

You: I think so, could I get the last 4 digits of their social security number for complete verification? I'm in a hurry and I don't have time for kids pranking me.

ISP: Yessir, their SSN is (SSN here)

You: Thanks, I'm sure this guy isn't joking with me then, I'll talk to you later, thanks for helping me!

Call ended

You've managed to get a lot of things with their ISP, but if you don't want to do anything illegal, I'll include other methods that don't involve ISP doxing later, so keep reading!

List of ISP tools -

http://pastebin.com/WkFX7CNq (Had to Pastebin it because it was so large)

Doxing With Their Email

If you have your target's email, doxing them should be very simple. There are multiple methods to use in doxing with their email like Facebook doxing, PayPal doxing, and simple searches so I'll go over the good methods.

Using PayPal with their email -

If you have your target's email, log into PayPal. This method will require you to have one sent, so go over to the "Send money" tab. Once you're there, put their email into the email tab and for the amount of money, put "$0.01" and send the money. Wait about 2-5 minutes and refresh the main PayPal home page so you can get their full name. If I'm not mistaken, PayPal is patched seeing your target's other information like their address using this, so all you'll get is their full name, I'll show you how to dox with a name later.

Using Facebook with their email -

If your target hasn't told Facebook to not allow people to find them via their email, then this should get you their Facebook. Create a fake Facebook if you'd like, or just use your personal Facebook and input their email in the "Search for people, places, and things" box and press the enter key or click the magnifying glass. It should come up with the profile connected to that email. If your target only allows friends to see their contact info and other things, then just make a fake account and add them on it, chances are high that they'll add you if you look legit, then you can get other things such as family members which can be doxed as well once you finish this target to make the dox look even better.

Using Skype with their email -

So maybe you don't know your target's Skype, but you have his email, you can easily grab his Skype with his email. Basically all you have to do is copy their email and go to Skype and click "Add Skype User" and from here, we'll input their email into the box. Chances are their email will be linked to their Skype. Once we have their Skype, we can go over to a Skype resolver and get their IP, then that'll lead to an ISP dox, continue reading to learn more.

Using sites with their email -

Their are tons of sites that you can use to search their email for, kind of like IP to location tools.

List of email searching sites -

http://celerystresser.com/email_dox
http://www.spokeo.com
https://www.facebook.com/
http://com.lullar.com/
http://www.spokeo.com/
http://www.everify.com/email.php
http://www.emailfinder.com
http://www.pipl.com

Doxing With Their Name

If you have their full name, doxing them can be easier but not 100% accurate as a lot of people can have the same name as your target unless they have some detailed name like "Eujianem Frujasesh" since nobody usually has names like that, but you should be 100% and get their IP first so you can get their city or state to throw in with their name to make the search more accurate. Their are a lot of sites to search there name on, I'll be using Whitepages.com for my explanation.

List of name searching sites -

http://www.192.com/people/search/
https://www.facebook.com/
https://pipl.com/
http://wink.com/people-search
http://www.ussearch.com/
http://www.kgbpeople.com/
http://www.yoname.com/
http://webmii.com/
http://www.whitepages.com
http://www.yellowpages.com/findaperson
http://www.yasni.com/
http://www.whitepages.com/find_neighbors
http://www.zabasearch.com/
http://www.spokeo.com/

http://www.411.com/
http://www.foo.com/
http://www.lookuppeople.co.uk
http://www.doxeus.com/

Once you're on Whitepages.com, the default page should allow you to input their first and last name into the box that says "first and last name", once you put their name their, put their city or state in the box that says "city, state, or zip" and click the "Search Button" and you'll be taken to the results page. This will give a list of people with that name in the area you entered. Remember, you don't have to input their city, state, or zip but it just makes it easier and more accurate. WhitePages will give you their address, and possibly their phone number for contact. It can also give you people that they might know (you can confirm if they know them or not by checking if the have the same address or phone number on their WhitePages page).

What's that you say? Your target isn't 18 so he isn't showing up on a lookup? There is a simple fix to this. Basically, you should try and find your target's email address. With their email address, you can find their Facebook. If you already have their Facebook though, look for family members or relatives throughout their profile. If you can't see friends/relatives, try making a mule (mule = disposable) account and adding them. They'll usually add you if your account looks like a normal person. You can try to get more likes and shit on your account from sites like addmefast.com or like-ex.com to get your account looking more legit. Once you find your target's parent(s), then put their parent's name in Whitepages and search them. If you find your target's parent's address, then you'll have their address as well unless they're living with a different parent. You can easily confirm if you have the right address or not by checking if the address you pulled from their parent is in the city/state of the target's IP address. If they're in two different locations, you'll need to find another relative/parent that lives in the same state, this'll usually give you their correct address, we don't want a dox that isn't accurate.

Doxing With Their Phone Number

A lot of sites allow you to dox someone using their phone number, I'll use Whitepages.com in my explanation of using these but you can use what you'd like.

List of phone number searching sites -

http://www.usaphonelookup.com/
http://phonenumbers.addresses.com/phone.php
http://www.whitepages.com/reverse-lookup
http://yellowpages.com/

http://www.freecellphonedirectorylookup.com
http://www.numberway.com/
http://www.phonenumber.com/
http://www.fonefinder.net
http://www.pipl.com
http://www.spokeo.com/

Once you're on whitepages.com, click the tab that says "Phone" and input their number to search for them. This option could give you their full name and address. Search their full name to get extra information on your target, like their Facebook page which could lead to other things like their email address and known sites they're on. There isn't much I can say about doxing with their phone number, it's pretty simple.

Doxing With Their Address

If you have the target's address but not their phone number or full name, then you can use sites to search for the owner of the address. I'm not sure how the hell you got their address but not their name or phone number, but I'm not asking questions here so let's do it. I'll be using whitepages.com again to show you how to dox them with their address.

List of address searching sites -

http://www.spokeo.com
http://www.peoplefinders.com
http://www.addresses.com/
http://www.peoplesmart.com

Go to the website - http://www.whitepages.com/reverse_address - and input their address into the box that says "e.g. 1234 main st" and as for their city, state, or zip, put it in the box that says "city, state, or zip", then you press the "Search" button to get their contact information. Once you have their information like their phone number and full name, you can find out their Facebook and gain their relatives' information or more contact information from your target like their email.

Doxing With Their Alias

Okay, so if your target is using an alias that you know they use a lot, then doxing them with it could be done. Remember, doxing by alias isn't always accurate. Think of this scenario - I'm using the alias "Cummy Sheets" and you want to dox me by my alias,

other people could have this alias as well so you might get mixed up results and a dox that isn't accurate so keep that in mind, doxing by alias isn't the best method. Anyways, let's get into it. Make sure you have the right alias for your target, copy it, and follow one of the tutorials for one of the sites below of your choice.

List of alias searching sites -

1. http://www.pipl.com/ (My favorite)
1) Visit the address.
2) Input their alias into the box that says "Name, Email, Username, or Phone" and press the blue button with the magnifying glass in it.
This is a really good search engine for alias(s), I recommend using this one over any others.

2. http://knowem.com/
KnowEm searches over 575 popular social media websites to check for the alias entered so this is a good choice.
1) Visit the address.
2) Paste the target's alias into the box that says "enter name here" and click the "Check It" button next to it to search for the target's alias.

Doxing With Tools

I don't really recommend using tools but I'll throw these in here for those who are lazy or just want to use them for extra verification or whatever. There are several tools for doxing floating around HF so I'll link you to some. Please note that I do NOT vouch for any of these tools or their safety, you downloading them is at your own risk, I'm simply linking you to threads with doxing tools on them, so don't blame me if you end up finding a RAT on your PC.

List of doxing tools -

Drizzy's Doxing Tool: http://www.hackforums.net/showthread.php?tid=4252995
Dreamwalker's Tool: http://www.hackforums.net/showthread.php?tid=4127701
Natas's Tool: http://www.hackforums.net/showthread.php?tid=2436958

Using these tools are fairly easy. Once again, I'm not vouching for these tools or their safety, but I've used Drizzy's tool before and I can tell you guys, it's pretty good and can be helpful whenever you want any extra information that you haven't found manually. I won't cover how to use them though.

Doxing With Skype & Facebook

You guys probably already know this method but some people don't, so I'll throw this in here. Doxing them if you have them added on Skype is really easy. Login in to facebook, then go to: https://www.facebook.com/?sk=ff and look for the Skype logo, click the Skype logo then login. Then, click "skip" and after that, confirm by clicking skip again. Once that's done, click no. Then go to: https://www.facebook.com/invite_history.php and look for your victim's Skype name on the left side of the page. Then click on their partial email next to their display name. A captcha box should be displayed, fill it out, and wallah, there is your victim's email! If you want to dox them using their email, go back in this eBook and look for the part that shows you how to dox them using their email.

Doxing With Their Website

Doxing someone with their website it pretty fucking sick. You barely work for their information and you obtain lots of things like their email, address, full name, phone number, city, state, etc. so if they own a website and they created it using legit information, we can get their dox easily. I'll be using the site "whois.domaintools.com/" for the explanation of doxing with a website.

All you have to do is simple, really. Just copy the following link - whois.domaintools.com/ - and paste it into the address bar DON'T press enter yet, add their site link after the "/" symbol. For example, if I wanted to use this on Hackforums.net, I'd use - whois.domaintools.com/hackforums.net - to gain the information of the target. Another way to do it is simply going to the site - whois.domaintools.com/ - and input their website in the box that says "Enter a domain or IP address..." and press the "Search" button next to it. (Note: there are two of these boxes, use whichever one you'd like, it doesn't matter, lol) Once you've searched their domain, you'll see a lot of personal information on the target. Make sure you're getting the information of the registrant or admin, not the registry/registrar. For example - "Registrant Name: (target's name here)" but if you copy the "Registrar Name" then you'll only get the name of the domain provider, not your target's name.

Doxing With Their Picture

Okay, so maybe you have a picture of your target but you don't have their name or anything. Having a picture when doxing is easy, there are a few sites where all you need to do is input their picture and it'll search billions of sites for that picture, it's amazing. I will be using the site - tineye.com - to show you how to use these.

List of picture searching sites -

http://tineye.com
http://images.google.com/
http://face.com
http://feelimage.net
http://ginipic.com

Now that you're on tineye.com, go to the image you want to search for. I recommend saving the image to your PC and then uploading it. Once you have saved the picture to your desktop, click the "Choose File" box on TinEye and find the picture you want to search the web for, it should search for it by itself once the file finishes uploading to TinEye. If you want to do it by url, right click the picture you want to search and select "Copy Image Url" and paste it into the "paste URL here" box and press the "Search" button to search the web for that image.

Simple Google Searches

These are a few methods you can use on Google to find information on your target. If your target has put their Skype in a post on a forum like Rune-Server, you can easily find profiles and emails from it. For example - my target posted on HF "pls add my skype: analpls123", then you'll find that off a Google search using the method below.

Go to Google.com and search their Skype name. Try different searches like -
Skype: (Their Skype Name Here)
Skype Name: (Their Skype Name Here)
Skype:(Their Skype Name Here)
Skype Name:(Their Skype Name Here)
My Skype Is: (Their Skype Name Here)
Add Me: (Their Skype Name Here)

Just get creative with it to see what you'll find on them.

You can also use this with their email. For example - if they posted their email in a post on a forum like "contact me email: fgt12332@gmail.com", you can easily find their email with a Google search.

Go to Google.com and search their alias with the "@" symbol after it. Try different searches like -
(Their Alias Here)@ (Yes, I know there isn't a domain after this, this is in case they have their own email spoofed like "aidsboy@null.sec" or something like that)
(Their Alias Here)@gmail.com

(Their Alias Here)@yahoo.com
(Their Alias Here)@safe-mail.net
(Their Alias Here)@hushmail.com
(Their Alias Here)@hotmail.com
(Their Alias Here)@hotmail.co.uk
(Their Alias Here)@outlook.com
(Their Alias Here)@outlook.de
(Their Alias Here)@mail.com

Just get creative with it, good luck.

Posting The Dox

What's the point of doxing someone if you're not going to drop it? There are lots of sites that you can paste the dox on so if one site removes it, it's on other sites so it doesn't fucking matter if they report your dox or not. My favorite is doxbin but you can post it on whatever site you want. Here are a few sites you can post the dox on, have fun.

doxbinzqkeoso6sl.onion.lt - Doxbin
anonbin.com
fbi.yt
skidpaste.org
pastebin.com (Your dox can be removed from here if they report it so be sure to use the other sites and not just one)

What You Can Do With The Dox

There are a number of things you can do with a dox if you have their address. I won't go in-depth on these things but you can find out more about them yourself, they're pretty self-explanatory though.

Sending Pizzas

You can order a shitload of pizzas to your target's house. This'll piss off both the driver and the target because they're both having their time wasted, it's pretty funny.

Sending Boxes

You can send a shitload of boxes to your target's house as well. This'll freak him out having a bunch of random boxes coming to his house that he didn't order.

Sending Males/Females

You can make an advertisement on craigslist that you're the target and you're looking for singles in your area. Make sure you include their address in the description of the site, don't include any phone numbers, just say "come straight by, i accept people for who they are so if you're small or ugly or even different, ill accept u" so people don't need verification. This'll be weird as fuck having people knock on your target's door asking for sex/relationships, especially if your target isn't an adult, their parents will probably kick them off the internet for a lifetime or two. XD

Swatting

If you were looking for swatting tips, get the fuck out of here. I hope nobody ever attempts this, I won't go over this at all, I'm just including this to tell you that if you intend to swat someone, you're a fucking retard and deserve to be locked up, I hope you get locked up and experience anal rape, dick. Thanks to anyone who wasn't looking for tips on swatting, you're pretty smart, most swatters get caught eventually so I don't see the point in trying.

Yard Giveaway

You could say you're the target on craigslist giving away free shit, just come by the target's address and ask for anything, you'll receive what you wish. Make it believable like "i just hit the lottery so im giving away free shit that i don't need anymore, hurry up before i move and give it away!!! thanks - (address of target here)" and he'll get a bunch of retards coming to his house asking for free things, it'll be hilarious.

DDoSing

If you have your target's IP address, you can load their IP up in a booter and hit their asses offline for good. This method is also very illegal and can get you in a lot of trouble, so keep that in mind but I doubt the gov. will come after you for DDoSing one little person that isn't important unless you're trying to DDoS a government website/associate/fed, then you'll probably get in some trouble. When you DDoS someone, you're preventing from using their internet, they'll be pissed as their wasting their money for internet and they cannot access the web until you're done DDoSing them. There are a lot of ways to DDoS someone, botnets and web booters are two options but there are more. Note that one web booter won't usually take down a website or something like a Runescape private server or a Minecraft server, you'll need more than one depending on how much the VPS is being paid for. For example - if someone is paying around $30 a month for their VPS, about 3-5 booters should be able to knock that shit down, but there is no guaranteed takedown, it all depends on how strong your web booter is so I suggest getting some good ones like the ones listed below or some on top10booters.net, or find one on your own.

List of web booters -

Closing Words

Once again, I just want to thank you for buying this eBook over all those other ones out their. I hope you've learned some things that you haven't learned. Feel free to vouch for me as it'll help me get more customers. Write an honest review on it, if my product was a bad choice, please post it but don't be a dick about it, tell me what was wrong and I'll try to improve it for other customers. Please message me, Kouichi, on HF if you have any problems, questions, comments, concerns, or if you want to request a refund, thanks. Remember, this eBook belongs to Kouichi from HF, please, please warn me if someone has sold/gave this to you besides me, I'll handle it myself. Hey, what if you put a lot of time and work into an eBook, and I bought it and gave it to all my friends for free? You'd be mad as hell, right? So would I. So please, do not give my eBook out to anyone else, just direct them to my thread and let them buy it themselves,
